Directions

1. Your kit has six pieces of precut wood, each labelled from 1 to 6. Also attached is a bag with seventeen 2" coated nails, two 1 1/2" finish nails (door hinges), and one screw (door closure). All lumber is 3/4" thick with predrilled nail, entrance, and ventilation holes.
2. Mount sides #2 and #3 on back #1, matching the bevels of the side with the bevel of the back. Make sure that all numbers are inside. This is best done with an extra set of hands to help hold the pieces while nailing.

1

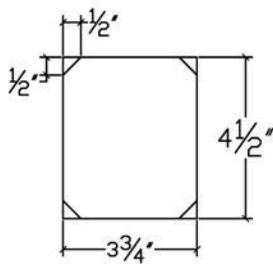

2 & 3

- Slide bottom #4 in place and nail back and sides to bottom.

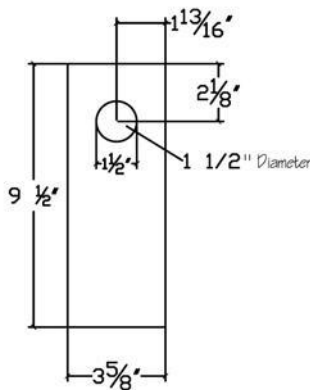

BOTTOM

4

- Nail door #5 in place with the two hinge nails at the bottom of the door through the predrilled holes in the sides. Make sure that the # and the grooves are on the inside. (Grooves are to help the young fledglings climb out of the box.) Make sure that you leave enough space at the top so that the door will open easily. Also check that the screw hole at the top right side (facing front of box) lines up with the side of the door.

FRONT DOOR

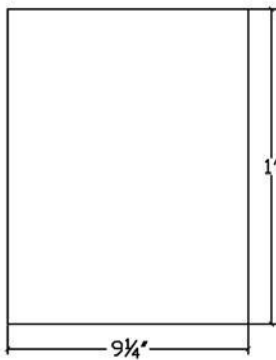

5

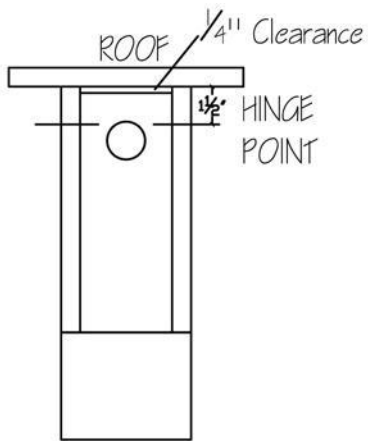

5. Attach roof #6 lining up bevel of the roof with the bevel of the back.
